

NeonPanel Installation Guide

Complete Setup Instructions for Claude Cowork

Status: NeonPanel is currently pending publication to the official Claude marketplace. This guide walks you through the manual installation process to get started immediately.

What is NeonPanel?

NeonPanel is a comprehensive Claude plugin that brings 8 specialist agents into your workflow: customer success management, inventory replenishment, supply chain logistics, marketing research, accounting analysis, sales forecasting, market intelligence, and financial planning. Each agent specializes in domain-specific tasks to help you work smarter with your Amazon business data.

Before You Begin

Prerequisites

- A NeonPanel account — don't have one? Sign up free at my.neonpanel.com/register
- Claude Cowork installed on your desktop
- Your Amazon and Shopify accounts connected to NeonPanel (required for the agents to access your data)

How This Guide Works

This guide walks you through three simple steps: (1) downloading the NeonPanel plugin from GitHub, (2) uploading it to Claude Cowork, and (3) connecting your NeonPanel account via OAuth2. Once installed, the 8 specialist skills activate automatically and you're ready to go.

Estimated time: 5–10 minutes

Installation Steps

Step 1: Download from GitHub

- 1.1 Visit the NeonPanel GitHub repository at <https://github.com/neonpanel/claude-plugin>
- 1.2 Click the green Code button and select "Download ZIP" to download the plugin to your computer.
- 1.3 Extract (unzip) the downloaded file. You'll see a folder named claude-plugin-main.

Your Downloads folder is a good temporary location while you complete the next steps.

Step 2: Upload to Claude Cowork

- 2.1 In Claude, click the + button in the chat input area → Plugins → Add plugin.
- 2.2 In the menu that appears, select Create plugin → Upload plugin.
- 2.3 Select the claude-plugin-main folder you extracted in Step 1. Claude will validate and import the plugin — you'll see a confirmation once complete.

Alternatively: open Customize in the left sidebar → click + next to Personal plugins → Create plugin → Upload plugin.

Step 3: Connect Your NeonPanel Account

- 3.1 A dialog will appear asking you to connect your NeonPanel account via OAuth2. Click Connect.

Don't have a NeonPanel account yet? Create one free at my.neonpanel.com/register, then connect your **Amazon** and **Shopify** accounts inside NeonPanel. This gives the agents access to your business data.

- 3.2 You'll be redirected to NeonPanel to log in. Use your NeonPanel account credentials (the same email and password you use to access NeonPanel).
- 3.3 Once authenticated, you'll be redirected back to Claude. The connection is complete!

OAuth2 is a secure, industry-standard authorization protocol. Your password is never shared with Claude.

You're Ready to Use NeonPanel

All 8 specialist skills are now active in your Claude instance. Invoke them by name in any chat conversation, or access them through the Plugins menu. Each skill provides domain-specific guidance on your Amazon business data—from forecasting and replenishment to accounting and competitive analysis.

Meet the 8 Specialist Agents

Neon Customer Success: Onboarding, data import, account setup

Dorian (Replenishment): PO planning, reorder points, stockout risk

Nina (Supply Chain): Inventory tracking, shipment status, COGS analysis

Mark (Marketing Research): Listing optimization, keyword research, competitor analysis

Marta (Accounting): P&L analysis, general ledger, revenue reconciliation

Kio (Forecasting): Sales forecasts, demand planning, scenario analysis

April (Market Intelligence): Keyword gaps, competitive landscape, click share analysis

Sanjay (Financial Analyst): Cash flow planning, budget analysis, margin improvement

Troubleshooting

Q: Plugin won't upload

Ensure you selected the entire **claude-plugin-main** folder (not just the files inside it). The folder must contain a **.claude-plugin** directory for Claude to recognize it as valid. If the Upload plugin option isn't visible, try the alternate path: **Customize** → **Personal plugins +** → **Create plugin** → **Upload plugin**.

Q: OAuth2 connection fails

Double-check your NeonPanel email and password. If you forgot your password, reset it at my.neonpanel.com before trying again.

Q: Skills don't appear

Skills activate after OAuth2 authentication completes. If they don't show up, try refreshing Claude (reload the page or restart the app). Skills may take a few seconds to appear.

Q: Connection lost after restart

*If Claude is restarted, you may need to re-authenticate. Click **Reconnect** in the Plugins menu to restore your NeonPanel connection.*
